

Contents

1	Introduction	1
2	Formal Geometry of Differential Equations	9
2.1	A Pedestrian Approach to Jet Bundles	10
2.2	An Intrinsic Approach to Jet Bundles	18
	Addendum: The Contact Structure à la Gardner–Shadwick	27
2.3	Differential Equations	29
2.4	Some Examples	48
2.5	Notes	58
3	Involution I: Algebraic Theory	63
3.1	Involutive Divisions	64
	Addendum: Some Algorithmic Considerations	72
3.2	Polynomial Algebras of Solvable Type	76
3.3	Hilbert’s Basis Theorem and Gröbner Bases	86
3.4	Involutive Bases	94
3.5	Notes	100
4	Completion to Involution	105
4.1	Constructive Divisions	106
4.2	Computation of Involutive Bases	110
	Addendum: Right and Two-Sided Ideals	118
4.3	Pommaret Bases and δ -Regularity	122
4.4	Construction of Minimal Bases and Optimisations	132
4.5	Semigroup Orders	141
4.6	Involutive Bases over Rings	156
4.7	Notes	161
5	Structure Analysis of Polynomial Modules	167
5.1	Combinatorial Decompositions	168
5.2	Dimension and Depth	175

5.3	Noether Normalisation and Primary Decomposition	182
	Addendum: Standard Pairs	190
5.4	Syzygies and Free Resolutions	193
	Addendum: Iterated Polynomial Algebras of Solvable Type	207
5.5	Minimal Resolutions and Castelnuovo–Mumford Regularity	210
5.6	Notes	228
6	Involution II: Homological Theory	235
6.1	Spencer Cohomology and Koszul Homology	236
6.2	Cartan’s Test	246
6.3	Pommaret Bases and Homology	254
6.4	Notes	260
7	Involution III: Differential Theory	263
7.1	(Geometric) Symbol and Principal Symbol	264
7.2	Involutive Differential Equations	281
7.3	Completion of Ordinary Differential Equations	296
	Addendum: Constrained Hamiltonian Systems	302
7.4	Cartan–Kuranishi Completion	305
7.5	The Principal Symbol Revisited	310
7.6	δ -Regularity and Extended Principal Symbols	317
7.7	Notes	322
8	The Size of the Formal Solution Space	329
8.1	General Solutions	330
8.2	Cartan Characters and Hilbert Function	334
8.3	Differential Relations and Gauge Symmetries	343
	Addendum: Einstein’s Strength	352
8.4	Notes	353
9	Existence and Uniqueness of Solutions	357
9.1	Ordinary Differential Equations	358
9.2	The Cauchy–Kovalevskaya Theorem	370
9.3	Formally Well-Posed Initial Value Problems	374
9.4	The Cartan–Kähler Theorem	384
9.5	The Vessiot Distribution	392
	Addendum: Generalised Prolongations	404
	Addendum: Symmetry Theory and the Method of Characteristics	407
9.6	Flat Vessiot Connections	412
9.7	Notes	424
10	Linear Differential Equations	431
10.1	Elementary Geometric Theory	432
10.2	The Holmgren Theorem	436
10.3	Elliptic Equations	440
10.4	Hyperbolic Equations	449

10.5 Basic Algebraic Analysis	458
10.6 The Inverse Syzygy Problem	466
Addendum: Computing Extension Groups	473
Addendum: Algebraic Systems Theory	475
10.7 Completion to Involution	480
10.8 Linear Systems of Finite Type with Constant Coefficients	494
10.9 Notes	504
A Miscellaneous	509
A.1 Multi Indices and Orders	509
Addendum: Computing Derivative Trees	515
A.2 Real-Analytic Functions	517
A.3 Elementary Transformations of Differential Equations	519
A.4 Modified Stirling Numbers	525
B Algebra	529
B.1 Some Basic Algebraic Structures	530
B.2 Homological Algebra	544
B.3 Coalgebras and Comodules	559
B.4 Gröbner Bases for Polynomial Ideals and Modules	567
C Differential Geometry	585
C.1 Manifolds	585
C.2 Vector Fields and Differential Forms	592
C.3 Distributions and the Frobenius Theorem	600
C.4 Connections	604
C.5 Lie Groups and Algebras	608
C.6 Symplectic Geometry and Generalisations	610
References	617
Glossary	637
Index	639
